## **Apache CXF Web Service Development - Packt Subscription**

Having so many options for web service development, there is a need for an open source services framework to glue all the above mentioned options together and that is what Apache CXF does. In this tutorial, you will learn how to use CXF to create both a web service and a client that consumes the service, using one or more of the options that we have listed above.

## **Apache CXF - Introduction - Tutorialspoint**

Apache CXF is an open source services framework that makes web service development easy, simplified, and standard based. CXF provides many features such as frontend programming, support for different transports and data bindings, support for different protocols, and other advanced concepts like Features and Invokers.

## **Developing a Web Service with CXF - JavaBeat**

You can develop a service using one of two approaches: Start with a WSDL contract and generate Java objects to implement the service. Start with a Java object and service enable it using annotations. For new development the preferred path is to design your services in WSDL and then generate the code to implement them.

## **Apache CXF -- Developing a Service**

All samples provided by CXF use Apache Maven, except for the antbuild sample which shows how you can build CXF projects with Apache Ant instead. The mvn dependency:list and mvn dependency:tree commands from the Maven Dependency Plugin will show all dependencies used by your project. Writing your Service. First we'll write our service interface.

## **Apache CXF -- A simple JAX-WS service**

CXF is another web services stack from the Apache Software Foundation, the same group behind the Axis2 stack. Even though they come from the same organization, Axis 2 and CXF take very different approaches to how web services are configured and delivered.

## **Java web services: Introducing CXF**

The Apache CXF provides a robust framework that makes web service development easy, simplified, and standard-based. Finally, we looked at how to set up the CXF environment for both Ant and Maven users.

## **Summary - Apache CXF Web Service Development**

Apache CXF is an open-source, fully featured Web services framework. It originated as the combination of two open-source projects: Celtix developed by IONA Technologies and XFire developed by a team hosted at Codehaus. These two projects were combined by people working together at the Apache Software Foundation and the new name CXF was derived by combining "Celtix" and "XFire". The CXF key design considerations include: Clean separation of front-ends, like JAX-WS, from the core code. Simplicity
