Undergraduate Graduate Opportunities exist for individuals to pursue masters or doctoral level research related to SRF at Jefferson Lab. Several of the JLab staff members have adjunct faculty appointments with the major universities in Virginia. This enables students who have completed necessary course work to pursue their research taking advantage of JLab facilities and staff expertise.

Learn about the history of Earth's elements.

Searching desperately for work and sharing an apartment with three other girls in a Brooklyn brownstone, Jessica Darling is stunned when her on-again, off-again boyfriend, Marcus Flutie, asks her to marry him and gives her a week to think it over.

Since early childhood, communing with light beings and then working as a registered nurse for more than four decades, author Kathi Pickett has learned much about how the universe operates with the innate wisdom in your body to heal, to transform, and to manifest your desires. In *On Becoming You*, Pickett uses experiences from her personal journey to teach you the processes to gain personal power and a deeper understanding of how it all fits together with the energy and mystical laws to heal, manifest, and transform your life. It discusses: the mechanics of the energy system and the tools to foster health and vibrancy; how to heal through processes and tools that awaken you to your true nature; and how to invoke the nature of the highly structured, impersonal universe to create synchronicities, magic, and miracles. *On Becoming You* invites you to find rhythm and enjoy the life you were meant to live. Through stories, it unravels mysteries in a clear language to provide new insights and knowledge that can be woven into your being. Pickett inspires you to embrace new beginnings, to release inevitable endings, and to ignite a transformation on becoming you.

Sound healing therapy is rapidly gaining recognition as an important complementary medicine modality; this ground-breaking book uniquely presents techniques, based upon Chinese medicine theory, for integrating the use of precision calibrated Ohm planetary tuning forks and acupuncture needles, to create a new modality, *Vibrational Acupuncture™*. The chapters include: An overview of *Quantum Music Theory™* Guidelines for using tuning forks with or without needles Insights into our genetic imprint, the Eight Extraordinary meridians Anti-exhaustion treatments for readers caught in an excessively busy and dissonant world Treatments for saggy neck and temporomandibular joint dysfunction (TMJ) Treatments for balancing the twin hemispheres of the brain, and alchemically lacing the Three Jiaos An introduction to vibrational remedies and more An overview of the use of healing sound as a palliative to global technological addiction, and how it restores essential harmony to a world that is seriously out of balance

The Journal of Interdisciplinary Science Topics (JIST) form part of the 'Interdisciplinary Research Journal' module in the third year of both the BSc and MSci Interdisciplinary Science degrees. It is intended to provide students with hands-on experience of, and insight into, the academic publishing process. The activity models the entire process from paper writing and submission, refereeing other students' papers, sitting on the editorial board that makes final decisions on the papers, to finally publishing in an online journal. This book is a compilation of the papers written by undergraduate students that were published during the 2015/2016 academic year.

The original title for this work was "Mathematical Literacy, What Is It and Why You Need it". The current title reflects that there can be no real learning in any subject, unless questions of who, what, when, where, why and how are raised in the minds of the learners. The book is not a mathematical text, and there are no assigned exercises or exams. It is written for reasonably intelligent and curious individuals, both those who value mathematics, aware of its many important applications and others who have been inappropriately exposed to mathematics, leading to indifference to the subject, fear and even loathing. These feelings are all consequences of meaningless presentations, drill, rote learning and being lost as the purpose of what is being studied. Mathematics education needs a radical reform. There is more than one way to accomplish this. Here the author presents his approach of wrapping mathematical ideas in a story. To learn one first must develop an interest in a problem and the curiosity to find how masters of mathematics have solved them. What is necessary to be mathematically literate? It's not about solving algebraic equations or even making a geometric proof. These are valuable skills but not evidence of literacy. We often seek answers but learning to ask pertinent questions is the road to mathematical literacy. Here is the good news: new mathematical ideas have a way of finding applications. This is known as "the unreasonable effectiveness of mathematics."

The Christians' God Does Not Exist! Yes, He/She Does! By: Proncell F. Johnson Jr. Carl Sagan, popular astronomer, cosmologist, astrophysicist, and astrobiologist wrote: "We are Star Stuff which has taken its destiny into its own hands." The scientific community basically agrees that everything is made of atoms. Proncell F. Johnson Jr. says that they are all wrong! Johnson shows that the material universe (along with us mortals) is one big illusion for all things are actually incorporeal/spiritual, the manifestation of the spiritual being we Christians have come to call God. He says that the realization of and utilization of this fact will enable one to duplicate for himself the "so-called" miracles of Christ Jesus in degrees, thus proving the existence of this God, and the non-existence of matter. Johnson's proof is based upon a law of physics that make it all but impossible to refute as the below reviews confirm.

Take Five! for Science transforms those first five minutes of class into engaging writing opportunities. Students will brainstorm their way through 75 topics within three main science divisions: earth, life, and physical science. All prompts are aligned with NGSS and ELA CCSS as students debate, compare, investigate, question, and design in response to 150 prompts. Whether your students are working to save endangered ecosystems, investigating distant constellations, creating unusual animals, or constructing a design solution, these diverse and creative prompts will have students looking forward to each day when they're asked to "Take Five!" for Science. Begin every day of the school year with a burst of writing in the science discipline with this comprehensive and fun resource. Ready? Set? Take Five!
