Cardiac catheterization  
(heart cath) is the  
insertion of a catheter  
into a chamber or vessel  
of the heart. This is done  
both for diagnostic and  
interventional purposes.  
A common example of

Catheterisation  
The Essential

A cardiac catheterisation, or coronary angiogram, is a special test to find out if you have any problems with the coronary arteries (blood vessels that supply the heart muscle with oxygen), and to find out how well the pumping chambers and valves in

# Acces PDF Cardiology And

your heart are working.

A cardiac catheterisation will give your doctor information about your heart that they cannot always get from other tests.

Catheterisation  
The Essential

catheter is inserted in an artery or vein in your groin, neck or arm and threaded through your blood vessels to your heart. Using this catheter, doctors can then do diagnostic tests as part of a cardiac catheterization. Some heart disease treatments, such as coronary angioplasty and coronary stenting, also
