This book focuses on central themes related to the conservation of bats. It details their response to land-use change and management practices, intensified urbanization and roost disturbance and loss. Increasing interactions between humans and bats as a result of hunting, disease relationships, occupation of human dwellings, and conflict over fruit crops are explored in depth. Finally, contributors highlight the roles that taxonomy, conservation networks and conservation psychology have to play in conserving this imperilled but vital taxon. With over 1300 species, bats are the second largest order of mammals, yet as the Anthropocene dawns, bat populations around the world are in decline. Greater understanding of the anthropogenic drivers of this decline and exploration of possible mitigation measures are urgently needed if we are to retain global bat diversity in the coming decades. This book brings together teams of international experts to provide a global review of current understanding and recommend directions for future research and mitigation.

Lawrence Lessig, "the most important thinker on intellectual property in the Internet era", masterfully argues that never before in human history has the power to control creative progress been so concentrated in the hands of the powerful few, the so-called Big Media. Never before have the cultural powers- that-be been able to exert such control over what we can and can't do with the culture around us. Our society defends free markets and free speech; why then does it permit such top-down control? To lose our long tradition of free culture, Lawrence Lessig shows us, is to lose our freedom to create, our freedom to build, and, ultimately, our freedom to imagine.

This toxicological profile succinctly characterizes the toxicologic and adverse health effects information for fluorides, hydrogen fluoride, and fluorine. Fluorides are often added to drinking water supplies and a variety of dental compounds. Some fluoride compounds are also used in the production of glass and enamel and in the steel industry. Fluorine gas is used primarily to make chemical compounds used in separating isotopes of uranium for use in nuclear reactors and nuclear weapons. Hydrogen fluoride is used in the manufacture of fluorocarbons, which are used as refrigerants, solvents, and aerosols. This profile includes: (A) The examination, summary, and interpretation of available toxicologic information and epidemiologic evaluations on fluorides, hydrogen fluoride, and fluorine to ascertain the levels of significant human exposure

for the substance and the associated acute, subacute, and chronic health effects; (B) A determination of whether adequate information on the health effects of fluorides, hydrogen fluoride, and fluorine is available or in the process of development to determine levels of exposure that present a significant risk to human health of acute, subacute, and chronic health effects; and (C) Where appropriate, identification of toxicologic testing needed to identify the types or levels of exposure that may present significant risk of adverse health effects in humans. Tables and figures. This is a print on demand edition of a hard to find publication.

Imaging of Traumatic Brain Injury is a radiological reference that covers all aspects of neurotrauma imaging and provides a clinical overview of traumatic brain injury (TBI). It describes the imaging features of acute head trauma, the pathophysiology of TBI, and the application of advanced imaging technology to brain-injured patients. Key Features: Covers acute as well as chronic traumatic brain injury Written in an easily accessible format, with pearls and summary boxes at the end of each chapter Includes state-of-the-art imaging techniques, including the multiplanar format, the utility of multiplanar reformats, perfusion imaging, susceptibility weighted imaging, and advanced MRI techniques Contains over 250 high-quality images This book will serve as a practical reference for practicing radiologists as well as radiology residents and fellows, neurosurgeons, trauma surgeons, and emergency physicians.
