By the end of this reading you should be able to answer the following questions: What are the three concepts fundamental to programming, regardless of the language? Understand when each of these concepts might apply when writing a program. Name two strategies that can be helpful in planning your program.

Basic Programming Concepts

Excellent question! In Java, the programming language wants to know what kind of information you are going to be storing in a variable.. This is because Java is a strongly typed language.. I could teach you about what the difference is between a strongly typed language and a weakly typed language, but that will likely bore you right now, so let's just focus on what a type is in Java and why ...
