Digital Compositing: The digitally manipulated combination of at least two source images to produce an integrated result. By far the most difficult part of this digital compositing process is producing the integrated result—an image that doesn't betray that its creation was owed to multiple source elements.

Introduction to Digital Compositing

Natron is a powerful Digital Compositor that can handle all of your 2D/2.5D needs. Its robust OIIO file formats and OpenFX architecture is what make Natron the most flexible open source compositor for the visual effects community. Its interface and functionality are the same across all platforms such as MacOS, Linux and Windows.

NATRON

Compositing is the process or technique of combining of visual elements from separate sources into single images, often to create the illusion that all those elements are parts of the same scene. Live-action shooting for compositing is variously called "chroma key", "blue screen", "green screen" and other names. Today, most, though not all, compositing is achieved through digital image manipulation. Pre-digital compositing techniques, however, go back as far as the trick films of Georges ...
