Here are some tips for safely moving and operating cranes associated with wind farm sites. 1. Make sure lift plans reflect wind farm risks. Lift planning at wind sites involves unique hazards for crane operators to consider, including the presence of naturally windy conditions. Wind conditions can quickly change, creating a dangerous situation.

Crane Safety Tips for Wind Farm Construction and ...

With wind blowing from behind the crane, the load radius can be increased significantly, inadvertently overloading the crane and perhaps causing it to overturn. For example a shutter weighing 750kg with an area of 3.25m² and suspended on a 27m hoist rope will move 1.4m from the vertical when subjected to a 14m/s (31mph.) wind.

When the wind blows - Cranes Today

Influence of wind on crane operation - 3 - When the wind blows. Wherever people are working, mistakes are made. With crane operation the wind conditions can present a potential danger that should not be underestimated. The crane driver must ensure that the crane is not exposed to any wind that could exceed the limits set by the crane manufacturer.

Manual Crane Kato - mail.trempealeau.net

Wind gusts are considered the main risk factor on construction sites. Here is an easy way to understand wind risks: if wind speed increases by 2, the pressure exerted increases by 4. So, if a tower crane is working under a 12 mph wind and there is a sudden gust of 24 mph, it must resist a sudden load that is four times as high.
