### Statistical Reasoning in Psychology and Education ...

Within psychology, the most common standard for p-values is "p < .05". What this means is that there is less than a 5% probability that the results happened just by random chance, and therefore a 95% probability that the results reflect a meaningful pattern in human psychology. We call this statistical significance.

### Statistical Thinking | Introduction to Psychology

### Statistical Reasoning in the Behavioral Sciences: King ...

Make inferences based on data: By using what's known as inferential statistics, researchers can infer things about a given sample or population. Psychologists use the data they have collected to test a hypothesis. Using statistical analysis, researchers can determine the likelihood that a hypothesis should be either accepted or rejected.

### PS390 Statistical Reasoning in Psychology - Primenursingessays

The decision of which statistical test to use depends on the research design, the distribution of the data, and the type of variable. In general, if the data is normally distributed, parametric tests should be used. If the data is non-normal, non-parametric tests should be used. Below is a list of just a few common statistical tests and their uses.
