The title and the introduction announce clearly that the book is about the physiological processes determining the yield. Crop physiology is said to be distinct in that it provides useful information about plants growing singly and in stands under controlled conditions or in the field.

Renu Kanna-Chopra
(1999) have succinctly
discussed crop
improvement:
interaction of
physiology and
genetics. The yield of
crop is built through
several processes and
functions. The process
of yield formation
involves germination,
growth, differentiation,
development and
senescence.
